# HEADING TYPES AND SIZES

---

Here is the HTML coding for the different Heading sizes.

- ★ H1 is the largest and H6 is the smallest.
- ★ When you use the Heading tag, the font size is changed as well as bolded. You do not put the Strong tag with the Heading tag.

The screenshot shows a Microsoft Internet Explorer browser window titled "Sizes for Headings - Microsoft Internet Explorer". The address bar shows the file path "H:\Front Page\HTML\Heading.html". The main content area displays six heading sizes, each followed by the text "Cashman":

- Heading 1 - Cashman**
- Heading 2 - Cashman**
- Heading 3 - Cashman**
- Heading 4 - Cashman**
- Heading 5 - Cashman**
- Heading 6 - Cashman**

An overlapping Notepad window titled "Heading - Notepad" shows the following HTML code:

```
<html>
<head>
<title>sizes for Headings</title>
</head>
<body>
<h1>Heading 1 - Cashman</h1>
<h2>Heading 2 - Cashman</h2>
<h3>Heading 3 - Cashman</h3>
<h4>Heading 4 - Cashman</h4>
<h5>Heading 5 - Cashman</h5>
<h6>Heading 6 - Cashman</h6>
</body>
</html>
```

The browser's status bar at the bottom shows "Done" and "Trusted sites".
