

How to Add a Video

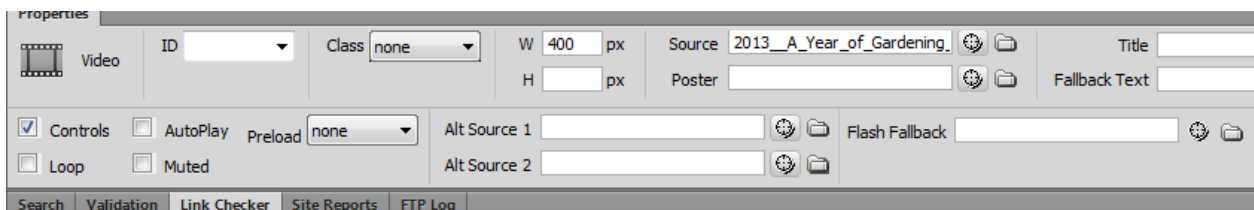

1. Find an appropriate video on Youtube for each of your websites.
(shorter is better)
2. Go to
 - a. <https://youtube-mp4.download/en/online-converter>
 - b. Then, Paste the youtube video url
 - c. Click the download button
 - d. Close the new Tab which opens up
 - e. Wait for it to convert

- f. Click on this button and save
In your root folders of the website the video is for.

3. Go into Dreamweaver and open the page of the website you want to place the video on
4. Click below the paragraph and go to the insert menu
And click on HTML 5 video

5. Click on the browse folder next to Source and find your mp4 video
6. You won't see the video in Dreamweaver, you need to f12/preview in browser for it to appear.
7. You can leave the Width and Height blank but then by default the video is very large. So I put 400 pixels in for the Width and left Height blank (it adjusts image proportionally)
8. Save your page a preview!
 - ✓ You can play around with the other controls in the property inspector.
 - ✓ Proper etiquette has you save the video in multiple formats so any/every browser can play it. You would add these other formats in Alt Source 1 & 2
 - ✓ Acceptable formats are: mp4, Ogg Theora, webm, ogv, 3gp and m4v

[IF the YouTube Converter does NOT work, you can embed your YouTube Video.](#)
