# How to make blinking minion eyes

1. Draw eyes.
   I suggest starting with the open all the way
2. Select the eyes.
   They should be on a layer by themselves
3. Press f8, or go to modify menu > convert symbol
   Make them a movie clip. *I suggest naming them blinking eyes.*

   If you are not in movie clip editor double click on the eyes!

4. Look at the labeled timeline for the different phases of blinking

   Remember to press f6 to add the current eye blink phase

To save time, I copied and pasted whenever possible.

Orange is fully opened eyes
Green is starting to close
Blue is almost closed
Purple is all the closed
